## Code Breaking...

## Alan Turing

Alan Turing was a British mathematician. He made major contributions to the fields of mathematics, computer science, and artificial intelligence. He worked for the British government during World War II, when he succeeded in breaking the secret code Germany used to communicate.

In September 1939 Great Britain went to war against Germany. During the war, Turing worked at the Government Code and Cypher School at Bletchley Park. Turing and others designed a code-breaking machine known as the Bombe. They used the Bombe to learn German military secrets. By early 1942 the code breakers at Bletchley Park were decoding about 39,000 messages a month. At the end of the war, Turing was made an Officer of the most Excellent Order of the British Empire.

| 80 | 63 | 19 | 3 | 27 | 30 | 21 | 92 | 18 | 35 | 99 | 69 | 19 <br> 9 |

Decode the message by completing the calculations:
$8 \times 8,50-41,25 \times 2$, half of $100,9 \times 7$
$23 \times 3,3$ squared, $11 \times 5,54 \div 2$,
$5 \times 6,15 \times 2+2,100-1$
$25+10,10-1,10 \times 5,90-6,100-37$, double $13,2 \times 4+1$
$3 \times 7,3 \times 20+3$
$8+1$, double $42,25-2,16 \times 2,40 \times 2,50+9,7 \times 3,65-2,80 \div 1$
Double 15, $90-2 \times 3,8$ squared, $70-7,21 \times 3,1 / 4$ of 200
Can you make up some calculations to spell out your name using the same code breaker grid?

Can you make up your own message for a friend or parent/carer to decode?

## Key Skills...

## This is an example of one of the types of homework that you will get. It's a review of skills covered in the previous school year.

| Question 1 <br> Write in figures one hundred and seventy four thousand, eight hundred and six | Question 2 <br> Write in figures eight five thousand and sixty four | Question 3 <br> Round 5061 to the nearest 10 | Question 4 <br> Round 492 to the nearest 10 |

Fibonacci was an Italian man who studied math and theories back in the 11th century. He discovered a pattern called the Fibonacci sequence. It's a series of numbers that starts with 0 and 1 , and each number after is found by adding the two previous numbers ( $0,1,1,2,3,5 \ldots$...) The sequence just keeps going on and on.

Can you find the first 10 numbers in the sequence?

## Find my number.

Use the clues below to find my number.
(Hint: Digital sum means the digits add up to this value.
Eg in 17 the digital sum = 8 since $1+7=8$ )

## Total Lines.

Numbers have to be placed in the empty circles. The numbers to be used are listed under each diagram and no given number may be used twice. The object is to place the numbers so that all those which lie along a straight line, as shown by the lines drawn, add up to the total which is also given under the diagram. The first one has been done for you.

Use 1, 2, 5, 6 Total 11

Use 1, 2, 4, 5, 6
Total 11

Use 2, 3, 4, 5
Total 13

Use 0, 1, 3, 4, 6 Total 10

Use 0, 1, 2, 3, 4, 5 Total 10

Use 0, 1, 2, 3, 5 Total 9

## CHALLENGE! <br> 

Use 3, 4, 5, 6, 7, 8, 9

## Total 18

## Cross Number...

Use the questions below to complete the cross number.
